

OXFORD FOOD GROUP FARMING

Wild blueberries
Carrots
Bees

Blueberry IPM

DISEASES

- Monitoring mummy berry plots
- Data-logging temperature, rainfall, leaf wetness
- Scouting fields and preparing reports

INSECTS

- Trapping insects
- Scouting fields and preparing reports

Infection Cycle of Monilinia Blight Stage Blighted^e Shoot Flower 🗘 Çonidium and Leaf Buds Blossom Infection Ascospores Ascus Fruit Rot Mummified Apothecium Fruit Overwintering Mummified Berries

F2 and V2 Growth Stages

there is a moderate to high severity rating after a frost or a high rating when no frost occurs.

Good spray coverage is essential for adequate control of Monilinia blight. Growers using mist blowers should not spray swaths of more than 15 meters (50 feet). Spray only under calm wind conditions.

Severity Rating of Monilinia Infection Periods

	Mean Temperature ⁹ C During Wet Period											
Wetness Duration (hours)	2º	6º2	109	149	18º							
2	nil	nil	nil	nil	nil							
4	nil	nil	nil	nil	nil							
6	nil	low	low	high	high							
8	nil	mod	high	high	high							
10	mod	high	high	high	high							
15	mod	high	high	high	high							
24	high	high	high	high	high
